☎ +91 7022981924

📄 SUMMARY

Thorough quality assurance professional highly skilled in manual and automated application testing. Partners successfully with project management and development team members to put out high-quality software for customers. Decisive in identifying problems at any stage of production.

🧠 SKILLS

Test Procedure Documentation
Collaborative Team Player
Cross-Functional Team
Collaboration
Scenarios and Use Cases
Defect Tracking and Reporting

📁 EXPERIENCE

Software Test Engineer, Infinite Computer Solutions

11/2021 – 12/2022

- Performed **functional and data validation testing** for SSIS/ETL packages with multiple parent-child package dependencies for **Quality Hedis Project, Molina**
- Executed packages through **Visual Studio**, configured required state-wise parameters, and established database connections for test execution.
- Traced end-to-end **data flow across DFDs (Data Flow Diagrams)** to verify successful package execution and data movement between source and target systems.
- Performed **source-to-target record count validation, duplicate checks, data completeness, and data truncation checks** across different DFD stages.
- Investigated data mismatches by validating intermediate source-to-target mappings and executing the SQL queries associated with each DFD.
- Created and maintained **test scenarios and test cases in Excel** and updated corresponding execution details against user stories in **JIRA**.
- Used **JIRA** for user-story tracking, defect logging, test execution updates, and defect retesting.
- Collaborated with development and business teams to analyze data issues, validate fixes, and ensure requirements were successfully implemented.
- **Common Tools/Technologies:** Visual Studio, SQL, SSIS/ETL, JIRA, Excel, DFD/Data Flow Validation, Manual & Functional Testing.

Software Test Engineer, Infinite Computer Solutions

07/2020 – 10/2021

- Performed **Manual, Functional, API, and Extract Validation testing** for healthcare applications and data processing workflows for **CVS Novologix Project, Molina**
- Validated **state-specific extract files** generated through **SSIS package executions** against business acceptance criteria, mapping documents, and predefined templates.
- Performed **source-to-target validation**, including record count, duplicate, null value, data completeness, field mapping, data type, and business rule validations.
- Used **QnXT application** to monitor and track package execution status and verify whether scheduled packages completed successfully or failed.
- Investigated missing or incorrect data by analyzing **package execution status, timestamps, source data, and generated extracts**.
- Performed **API testing** by validating request/response data, HTTP status codes, mandatory fields, business rules, and expected error scenarios.
- Executed **functional, integration, and regression testing** based on user stories and acceptance criteria.
- Created and executed test cases and maintained testing evidence based on business and technical requirements.
- Used **JIRA** for user-story tracking, test-case documentation, defect logging, retesting, and defect lifecycle management.
- Collaborated with developers and business teams to analyze defects, clarify requirements, validate fixes, and support successful releases.

Tools/Technologies: SSIS, QnXT, JIRA, API Testing, Manual Testing, Functional Testing, Extract/Data Validation

Senior Software Test Engineer, *Infinite Computer Solutions*

01/2023 – 11/2023

- Application: Salesforce-based application
- Testing: Manual Testing, UI Testing, Functional Testing, OCR Verification, Business Rule Validation
- Defect Tracking: Jira
- Analyzed user stories and validated application functionality against business requirements.
- Performed UI and functional validation of pages, links, buttons, fields, navigation, data display, and downloads.
- Validated data, formatting, keyword/value highlighting, and business rules against business-provided PDF documents.
- Performed OCR verification by comparing extracted data with expected business data.
- Created and executed test cases based on user stories and acceptance criteria.
- Logged, tracked, and retested defects in Jira and performed regression testing after fixes.

Senior Software Test Engineer, *Infinite Computer Solutions*

01/2024 – 12/2024

- Worked on the **Caresource project under the Hedis module**, primarily involved in end-to-end **ETL/data validation and testing** activities.
- Analyzed **developer-provided SQL queries** to understand the data transformation logic and validate the implementation against the defined business requirements.
- Executed **Azure Data Factory (ADF) pipelines** provided by developers and validated the files generated as part of the ETL process.
- Performed comprehensive data validation, including **record count validation, duplicate record checks, null/blank value validation, column mapping, data type validation, and business rule validation**.
- Performed **source-to-target validation** to ensure that data was accurately transferred and transformed between source and target systems as per the expected requirements.
- Investigated **missing or incomplete data** by analyzing timestamps and processing dates to identify when and where the expected data was missing.
- Used **SQL, Databricks, Excel, Python/Python scripts, and ADF** for data analysis, validation, troubleshooting, and test execution.
- Validated individual pipelines as well as **dependent/interconnected pipelines**, handling up to **5 related pipelines within a user story** whenever pipeline dependencies existed.
- Created and executed test scenarios based on **user-story requirements**, ensuring the implemented ETL flow satisfied the expected business rules and data conditions.
- Identified discrepancies during validation and **logged defects in Azure DevOps (ADO)** with appropriate details for developer investigation and resolution.
- Performed **retesting and regression validation** after defect fixes to ensure that the corrected implementation produced the expected data.
- Collaborated with developers to understand **query logic, pipeline execution, data transformations, and identified data discrepancies** during the testing lifecycle.
- Worked primarily with user stories involving individual ETL pipelines, while also handling complex stories containing multiple pipelines with dependencies.

Senior Software Test Engineer, Infinite Computer Solutions

01/2025 – 06/2026

- Analyzed and validated business user stories through the **Azure DevOps (ADO) board**, covering test scenarios, test cases, execution results, evidence/test result paths, defects, and overall story status for **Reporting Project, Caresource**.
- Worked on three major reporting streams: **SSRS Reports, TIDAL Reports, and MDP Reports**, performing end-to-end functional, data, and reporting validation based on business requirements and mapping documents.
- Analyzed user stories and requirements to understand business rules, source-to-target mappings, expected report output, data transformations, and validation scenarios before starting test execution.
- Developed an **AI-powered test case generation tool** that reads and analyzes **Azure DevOps user stories** and automatically generates relevant **test scenarios, test cases, and test review content**, reducing manual test case creation effort.
- Integrated the AI-based solution with **Azure DevOps (ADO)** to automatically populate generated test cases and review details directly into the respective user story/test management workflow.
- Used **Databricks and Python/PG-based processing** as part of the AI-driven solution to process user story information, apply validation logic, and support automated test case generation.
- Developed a **shell-script-based automation solution** for validating large-volume files, including files of approximately **30–40 GB**, without relying on traditional manual file processing.
- Automated large-file data validation by performing checks such as **record count validation, column count validation, column name/header validation, duplicate checks, NULL checks, and file structure validation**.
- Designed the large-file validation process to efficiently process high-volume datasets and identify data quality issues without manually opening or loading the complete file into traditional tools.
- Extended the file validation automation for both **CSV and Excel-based files**, enabling reusable data-quality checks across different file formats.
- Automated repetitive data validation activities and reduced manual effort by creating reusable scripts for **file-level, schema-level, and data-level validation**.

SSRS Report Validation

- Performed end-to-end testing of **SSRS reports**, validating report output generated through the UI against the underlying **database/source data**.
- Validated SSRS reports across **INT, CRT, and PROD environments**, coordinating with development/deployment teams for successful code deployment before executing QA validation.
- Reviewed developer-provided SQL queries and business mapping documents to understand expected source data, column mappings, business rules, and report output.
- Performed comprehensive data validation including **record count validation, duplicate checks, NULL validation, column mapping, data type validation, column name validation, and business rule verification**.
- Performed **source-to-target validation** by comparing SSRS report data displayed in the UI against the corresponding records and values available in the database.
- Verified report structure and formatting, including **column headers, column sequence, data formats, date/time formats, and overall report layout** against the approved requirements and mapping documentation.
- Investigated data discrepancies and missing records by tracing the data back to the source database and analyzing relevant timestamps, queries, mappings, and business rules.

TIDAL Report Validation

- Performed QA validation of **TIDAL reports/extracts**, including deployment verification, file generation validation, data quality checks, and source-to-target reconciliation.
- Coordinated with the deployment team to deploy TIDAL-related code into the required QA environment and validated the generated extract after successful deployment.
- Validated TIDAL extracts against the **source database** to ensure that the generated file contained accurate, complete, and correctly transformed data.
- Performed validation of **column mappings, NULL values, duplicate records, data types, date/time fields, record counts, and business rules**.
- Verified extract/file specifications including **file format, delimiter/separator, column structure, column headers, field sequence, and expected data formatting**.
- Validated TIDAL mapping/documentation requirements and identified missing or incorrect mappings that could result in report/extract validation failures.
- Performed detailed **source-to-target data reconciliation** to identify missing, mismatched, or incorrectly transformed records.

MDP / Databricks Validation

- Worked on **MDP (Modern Data Platform) reporting validation**, using **Databricks** to validate migrated reporting data and business scenarios.
- Validated migrated data and reporting scenarios after successful migration through the MDP process, ensuring that the expected business logic and data were correctly implemented.
- Executed validation scenarios in Databricks by comparing expected results with source data and previously validated reporting outputs.
- Performed data quality checks including **record counts, duplicate records, NULL values, column mappings, data types, business rules, and source-to-target reconciliation**.
- Investigated discrepancies between source and target datasets and performed root-cause analysis to determine whether issues were related to data, transformation logic, mapping, or deployment.

Test Management & Defect Tracking

- Maintained complete testing activities in **Azure DevOps (ADO)**, including test scenarios, test cases, execution results, evidence, defects, and user story status.
- Created and executed test scenarios based on business requirements, mapping documents, SQL queries, report specifications, and acceptance criteria.
- Logged and tracked defects in ADO with appropriate **steps to reproduce, expected result, actual result, supporting evidence, and severity/priority**, and collaborated with development teams through defect resolution.
- Performed **regression testing** after defect fixes and code changes to ensure existing reporting functionality and data validation scenarios remained unaffected.
- Participated in end-to-end validation across **INT, CRT, and PROD environments**, ensuring successful deployment and accurate reporting output before production release.
